## Applications Of Dynamical Systems In

A dynamical system is a manifold  $M$  called the phase (or state) space endowed with a family of smooth evolution functions  $\Phi_t$  that for any element of  $t \in T$ , the time, map a point of the phase space back into the phase space. The notion of smoothness changes with applications and the type of manifold. There are several choices for the set  $T$ . When  $T$  is taken to be the reals, the dynamical
