Data processed with GIS and spatial statistics are important to study COVID-19. • Decision making is the principle objective of COVID-19 studies with GIS. • Geographical aspects of the study of COVID-19 can be grouped into five categories. • COVID-19 requires an interdisciplinary approach with a global perspective. •

Spatial analysis and GIS in the study of COVID-19. A ...

Precision farming is defined as the application of technologies and principles to manage spatial and temporal variability associated with all aspect of agricultural production (Pierce and Novak,1999).

(PDF) Application of GIS in precision agriculture

to the development of vector GIS o From the discrete-object perspective, the task is to determine whether two area objects overlap, to determine the area of overlap, and to define the area formed by the overlap as one or more new area objects o The continuous-field version of polygon overlay does this by first computing a

14 Spatial Data Analysis - Dawn Wright

The process of computing the map locations of linearly referenced data (for example, attributes stored in a table) at run time so they can be displayed on a map, queried, and analyzed using a GIS. The dynamic segmentation process enables multiple sets of attributes to be associated with any portion of a line feature without segmenting the ...
