Structure. The common hepatic duct is the first part of the biliary tract. It is formed by the convergence of the right hepatic duct (which drains bile from the right functional lobe of the liver) and the left hepatic duct (which drains bile from the left functional lobe of the liver). It then joins the cystic duct coming from the gallbladder to form the common bile duct.

Structure. The platysma muscle is a broad sheet of muscle arising from the fascia covering the upper parts of the pectoralis major muscle and deltoid muscle.Its fibers cross the clavicle, and proceed obliquely upward and medially along the side of the neck.This leaves the inferior part of the neck in the midline deficient of significant muscle cover.
