Earthquake prediction is a branch of the science of seismology concerned with the specification of the time, location, and magnitude of future earthquakes within stated limits, and particularly "the determination of parameters for the next strong earthquake to occur in a region. Earthquake prediction is sometimes distinguished from earthquake forecasting, which can be defined as the ...

In order to reveal the mechanism of thermal-induced deformation and fracture development of salt rock under high temperature, the particle flow program PFC<sup>2D</sup> was used to study the triaxial compression failure process of salt rocks under different temperatures; at the same time, a combination model of Burge and Linearbond was proposed to simulate plastic deformation and heat ...

1. Introduction. Digital image devices have been widely applied in many fields, including recognition of individuals (Lei et al., 2016, Wen, Xu et al., 2020, Wen, Zhang et al., 2020), and remote sensing (Du, Wei, & Liu, 2019).The captured image is a degraded image from the latent observation, in which the degradation processing is affected by factors such as lighting and noise corruption (Zha ...

The impacts of climate change have resulted in the emergence of resilience as the de factor framework for countries seeking to capture the differential and uneven ability to prepare, react, respond and cope with volatile and rapid changes of climate-related stresses. Despite being considered by many researchers the most vulnerable region to the negative effects of climate change, the climate ...
