The atomic nucleus consists of protons and neutrons (two types of baryons) bound by the nuclear force (also known as the residual strong force). The baryons are further composed of subatomic fundamental particles known as quarks bound by the strong interaction.

WS2012/13: Introduction to Nuclear and Particle Physics ...

Diana Parno studies the physics of the neutrino, a fundamental particle that is generated in particle decays and nuclear reactions. The discovery of neutrino mass provided the first evidence of physics beyond the Standard Model in the electroweak sector, and tests of the neutrino mass scale offer a rare opportunity to probe a cosmological parameter in the laboratory.
