Introduction To Regression Modeling Abraham

This course provides an introduction to the statistical techniques that are most applicable to data science. Topics include

Page 5/17

regression, classification, resampling, linear model selection and regularization, tree-based methods, support vector machines and unsupervised learning. The course includes a computing component using statistical software.

Course Descriptions | Department of Mathematics and

Statistics

Nonetheless, standard regression provides a way to extend the number of equations, so a brief introduction follows. For more extensive treatment, consult any applied statistics text, as, for example, reference [27]. Regression divides into linear and nonlinear analyses. By their special design, Mtm models are multivariable and

Bayesian probability is an interpretation of the concept of probability,

in which, instead of frequency or propensity of some phenomenon, probability is interpreted as reasonable expectation representing a state of knowledge or as quantification of a personal belief.. The Bayesian interpretation of probability can be seen as an extension of propositional logic that enables reasoning with
