Technical Software Documentation Standards

Software documentation most commonly used in Agile projects. All software documentation can be divided into two main categories: Product documentation; Process documentation; Product documentation describes the product that is being developed and provides instructions on how to perform various tasks with it. In general, product documentation includes requirements, tech specifications, business logic, and manuals.

documentation with its 2651x number range is part of the "Systems and software engineering" standards series. The aim of the series of standards is to support the creation of consistent, complete, accurate, and usable information for users. The series of standards deliberately emphasizes a process-oriented view.

Software Documentation - Technical Communication

Software documentation is written text or illustration that accompanies computer software or is embedded in the source code. The documentation either explains how the software operates or how to use it, and may mean different things to people in different roles. Documentation is an important part of software engineering. Types of documentation include:

Requirements - Statements that identify attributes, capabilities, characteristics, or qualities of a system. This is the foundation for ...

Writing Software Requirements Specifications (SRS ...

Technical documentation refers to any document that explains the use, functionality, creation, or architecture of a product. Think of it as a nuts-and-bolts “how to” guide for your users, new hires, administrators, and anyone else who needs to know how your product works. But while that sounds pretty straightforward, the results rarely are.
